Cel Publishing, United States, 2011. Paperback. Condition: New. Aufl.. Language: English . Brand New Book. Please note that the content of this book primarily consists of articles available from Wikipedia or other free sources online. Methone is a very small natural satellite of Saturn lying between the orbits of Mimas and Enceladus. It was first seen by the Cassini Imaging Team and given the temporary designation S/2004 S 1. Methone is also named Saturn XXXII. Methone is visibly affected by a perturbing mean longitude resonance with the much larger Mimas. This causes its osculating orbital elements to vary with an amplitude of about 20 km in semi-major axis, and 5 in longitude on a timescale of about 450 days.
