

On Riemann's Theory of Algebraic Functions and Their Integrals; A Supplement to the Usual Treatises

Filesize: 6.91 MB

Reviews

This publication is fantastic. It is one of the most amazing publication i have got study. I am just pleased to explain how this is actually the best pdf i have got read through in my individual lifestyle and could be he finest publication for possibly.

(Mr. Kristoffer Hills)

ON RIEMANN'S THEORY OF ALGEBRAIC FUNCTIONS AND THEIR INTEGRALS; A SUPPLEMENT TO THE USUAL TREATISES

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1893 Excerpt: .SojM, the constants a, can be so chosen that this expression has at each cross-cut the same modulus of periodicity as u. Then;/--Saii is a constant and we have the formula just given. Passing now from the potentials u to the functions $u + iv$, finite everywhere, suppose, for simplicity, that coordinates x, y , employed on the surface (6), are such that u and v are connected by the equations $du dv du dv dx dy dy dx$ Now let it, be an arbitrary potential, finite everywhere. Construct the corresponding v_x ; then tt , and v , are linearly independent. For if between $-j$ and t_i there were an equation $O_j m_j + b_i v_y = \text{const.}$ with constant coefficients, this would entail the following equations: whence, by means of the given relations, the following contradictory result would be obtained: $= 0 = 0 dx dy$ Further, let u_2 be linearly independent of v , Then we may take the corresponding v_t and obtain the more general theorem: The four functions $- , u_3, v_{xt} ia$, are likewise linearly independent. For from any linear relation $a_j M_i + a_2 M_{j_i} + M_i + b_{f_i} l_i = \text{const.}$, by means of the relations among the t_i s and the v s, we should obtain the following equations: $(o, o, + A)-ifh-aA) jj + (a_3s + ,)-0, (0,0, + bA)-(-A-aA) J + (a, + W)-0$, from which by integration a linear relation among $tt, - -a$ would follow. Proceeding thus we obtain finally 2p linearly...
